https://github.com/Aditya-1209/30_donkeykong, clone this repo into my pc and then let me run the initial game, after that make the 4 commits listed as "tasks" in the readme file in the repo, then let me run the final game, after give me the final zip file containing the updated code and the chat history as a pdf. (I'll do the recordings myself)

Assistant | 08:35:09

I'll clone the repository and check the README, then get the initial game running for you before making the four task commits.

Assistant | 08:35:56

The repository is cloned. The four tasks are the 30% barrel descent fix, a score-based background color, a jump bonus effect, and a score multiplier.

I'm setting up Python and Pygame so you can play and record the unchanged game first.

Assistant | 08:37:58

The original game is running in the **Donkey Kong** window. No game code has been changed.

Controls: ←/→ move, **Space** jump, ↑/↓ climb, **R** reset.

Play and record your initial clip, then reply **"done"**. I'll make the four separate task commits, launch the final game for your recording, and package the updated code and chat-history PDF into a ZIP.

User | 08:46:20

done, u can do the 4 commits now

Assistant | 08:46:27

I'll make one commit per README task, test the changes, and launch the final game for your recording.

Assistant | 08:47:44

The first two commits are complete: barrels now use a 30% descent chance, and the background warms as the score rises. The tests also confirm that a barrel cannot retry a rejected ladder on the next frame.

Next I'm adding floating bonus labels and a 2× bonus at 500 points. The labels will show the actual points earned.

Assistant | 08:50:07

All four commits are complete, and the final game is running:

- **6d30f32** - 30% ladder descent chance
- **1032b0e** - Background warms with score
- **02388b7** - Floating jump bonus labels
- **4379b47** - 2× jump bonus from 500 points

All **10 tests pass**.

Press **R** to reset before recording. Reply **“done”** after your final recording, and I’ll create the ZIP containing the updated code, commit history, and chat-history PDF.

User | 08:57:39

done

Assistant | 08:57:43

I’ll package the updated code and commit history, and use the PDF skill to create a readable copy of this chat for the ZIP.

Assistant | 08:59:36

The ZIP is assembled with the updated source, chat PDF, and a Git bundle preserving all four commits. I’m checking the PDF layout and verifying that the bundled repository can be restored.
